The Quality of our Product

Quality that you can see. We are so confident of the quality of our silk that every one of our silk duvets has a large zipper so that you can see the silk inside. This is something that our competitors do not always provide.

Comfort

The nature of long fibre triple A grade silk fibres mean that a silk duvet is just as warm but much lighter than traditional duvets and drapes over your body instead of 'suffocating' you with the bulk of a down duvet

Product Care

Mulberry Silk Products Mfg. Co. Ltd. recommends that its duvets be drycleaned, professionally washed or machine washed on a low heat(30) and tumble dried on a low setting

Our 10 year guarantee

Mulberry Silk Products Mfg. Co. Ltd. makes its silk-filled duvets in a manner that the fill does not move, shift or come out at the seams. Mulberry Silk Products Mfg. Co. Ltd. guarantees the workmanship of this bedding product for a period of ten years. This guarantee does not cover normal wear, tear and product abuse by the purchaser. Also, the guarantee is void if the product is not used with a duvet cover or properly cleaned.

Is silk warmer than down?

Yes!

Like down there are many different grades of silk. The type of silk Mulberry Silk Products uses in its duvets is comparable to that of the best Eider down-filled duvets only without the exorbitant price. Most eiderdown down-filled duvets are extremely expensive

We can guarantee -- no cold spots!

Can your down duvet claim the same? Silk will not bunch up at the bottom of the duvet. Silk will not separate and leave you with only a thin layer of fabric between you and the cold night air. Mulberry Silk Products manufactures its silk duvets with the finest silk batting. The silk is hand stretched to the size of the duvet then stitched through with a cotton cover on both sides. This keeps the silk from moving and avoids the nasty cold spots that occur with most down duvets.

ALLERGIES - Are you always sneezing and wheezing?

Maybe it's who you're sleeping with! That's right! Your duvet may be what is between you and a really good night sleep. You might have an allergy to down and feathers or to animal hair such as wool. As the down and feathers in your duvet degrade you will find your allergies getting worse. Allergy sufferers can rejoice silk is non-allergenic. Avoid the sneezing and wheezing by getting a silk duvet (from Mulberry Silk Products of course). Mulberry silk bedding is naturally hypoallergenic and is an environment dust mites find inhospitable.

Silk bedding can also be of benefit in the following areas:

Osteoarthritis

Our duvets gently cocoon the body as they drape over us moulding to our body which eliminates single points of pressure .

Shingles

Significant relief of shingles can be gained by using our silk duvets. Our duvets are soft and light creating no pressure on the skin

Dry skin

Silk has an amazing ability to help our skin reabsorb moisture through the natural occurring amino acids within silk. Absorbing moisture that has been lost during the day while sleeping will aid in rejuvenating the skin whilst we sleep. This is hugely beneficial to sufferers of both eczema and dry skin

Overheating

Silk has an amazing ability to keep us cool when its warm and warm when its cool. It does this by allowing the body heat to dissipate, conventional duvets work in a similar way to a pressure cooker as they will absorb our body heat whereas a silk duvet will reflect our body warmth also allowing heat to escape.
